

Module 1: How the Web Works

Vibe Coding - Web Development Bootcamp - Lesson 1

Vibe Coding - Web Foundations.

Build a solid understanding of how websites are structured, styled, loaded, and viewed across devices. In this lesson, you will learn how the web works through a practical school-style project. Focus on the core concept, build a small deliverable, review your decisions, and save evidence of your work for your portfolio.

Production practice: write down the goal, the target user or client, the tool settings you used, and what you would improve in the next version. By the end of this lesson you should have a concrete checkpoint that can be reviewed by a tutor or included in your graduation project.
